Tejas Santosh Bhavekar

B.Tech. in Mechanical Engineering | Indian Institute of Technology Indore
bhavekar.tejas@gmail.com | +91-8425910120 | GitHub | LinkedIn | Website

Research Interests: Robotics, Mechatronics, Autonomous Robotic Systems, Robotic Hardware & Systems Integration, Motion Planning & Control, Perception and Sensing

EDUCATION

•Indian Institute of Technology Indore

B.Tech. in Mechanical Engineering, CGPA: ***8.92/10*** 2023–Present

•CBSE Board

Senior Secondary, ***94.8%*** 2023

•ICSE Board

Secondary, ***94.8%*** 2021

RESEARCH EXPERIENCE

•Human-Interactive Robotics Lab (HiRo Lab) *May 2026 - July 2026*

Research Intern under Prof. Ravi Prakash **Indian Institute of Science, Bangalore**

- Analyzed Geometry-aware Policy Imitation (GPI) for robot manipulation and identified its policy-averaging failure under homotopy ambiguity through geometric retrieval and vector-field analysis.
- Developed neural world models for one-step and direct multi-step dynamics prediction, integrating predicted future rewards into GPI for consequence-aware retrieval; achieved 100% success across randomized environments.
- Implemented closed-loop Panda manipulation in MuJoCo using Mink inverse kinematics, SE(3) task-space control, gripper actuation, trajectory recording, and GPI-based demonstration execution.

•IASc-INSA-NASI Summer Research Fellowship Program (SRFP) *May 2025 - Jul. 2025*

Research Intern under Shri. Tarun Bangia **ARIES, Nainital**

- Developed hybrid anomaly detection for azimuth/altitude motors of 3.6m Devasthal Telescope by combining Random Forest, Isolation Forest, One-Class SVM & LSTM Autoencoder with custom time-series features.
- Developed interactive Streamlit GUI for 3.6m Devasthal Telescope by enabling file-wise anomaly classification, result aggregation, and severity visualization across Normal, Suspicious, and Anomalous labels.
- Performed FFT-based vibration analysis on large optical assemblies during crane-assisted motion using accelerometer data and validated results with ANSYS modal frequencies to ensure structural safety.

SELECTED PROJECTS

•Autonomous Rover for Warehouse Rack Inventory Management *Nov. 2025 - Dec. 2025*

Inter IIT Tech Meet 14.0 (Problem Statement by Eternal) Drive

- Led the project of an autonomous rover integrating chassis, motors, sensors, actuators, and controllers.
- Implemented a belt-driven vertical scanning mechanism using a stepper motor for multi-level shelf scanning.
- Integrated drive motors, encoders, sensors, and custom wiring harnesses for reliable electromechanical operation.
- Developed power and safety hardware, including battery monitoring, voltage regulation, and emergency stops.

•Development of a Device for Characterizing Post-Cooking Traits of Rice *Aug. 2026 - Present*

B.Tech Project Under Prof. Ankur Miglani

- Developed an automated rice characterization system integrating Raspberry Pi, camera, and thermocouples.
- Implemented computer-vision methods for grain segmentation, geometric measurement, and deformation tracking.
- Implemented growth-rate-based saturation detection for autonomous soaking-to-cooking stage transition.
- Designed a closed-loop temperature control system using thermocouple feedback and relay-based heater actuation.

•3D-Printed Quadruped Robot Design and Development *Jan. 2026 - Apr. 2026*

Design of Machine Elements Course Project GitHub

- Developed a quadruped robot employing a 4-bar linkage mechanism for efficient leg actuation and balance.
- Led hardware integration involving servo motors, power architecture, system assembly, and overall testing.
- Implemented crawl and diagonal-pair gait control strategies for stable quadruped locomotion using Arduino.

•Model CubeSat Project *Oct. 2024 - Nov. 2024*

CAE (Computer Aided Engineering) CLUB GitHub

– Enabled sensing and onboard positioning for the CubeSat using specific environmental and orientation sensors.
– Designed and assembled a custom PCB to streamline sensor connectivity for accurate data acquisition.
– Developed a real-time Graphical User Interface to monitor critical flight parameters during the Cubesat's flight.

•Development of Autonomous Lawn Mower *Aug. 2025 – Present*

Academic Project under Prof. Vimal Bhatia Drive

– Designed and assembled a remote-controlled lawnmower using motor drivers, sensors, and embedded hardware.
– Integrated Raspberry Pi and control circuitry to enable field navigation over defined paths.
– Focused on mechanical structure, drive system configuration, and hardware-level integration for reliable operation.

•Micromouse - Maze-solver Robot *Jul. 2024 - Jan. 2025*

ROBOTICS CLUB

– Enabled obstacle avoidance in Micromouse by integrating ultrasonic sensors, IMU, and time of flight sensors.
– Used STM32-Arduino hybrid architecture for efficient hardware integration and faster, real-time control logic.
– Designed and tested PCB layout to streamline circuitry, improve performance, and make a compact robot.

TECHNICAL SKILLS

- **Hardware & Electronics**: Microcontroller Development (Arduino, ESP32, STM32*, Raspberry Pi*), Sensor integration, PCB Design (Schematic creation, layout design, and testing)
- **Programming**: Python, C++, Java*, MATLAB*, ROS2*
- **Data Analytics**: Feature Engineering, Time-Series Analysis, Predictive & Preventive Maintenance, Anomaly Detection, Machine Learning Fundamentals
- **Design & Simulation**: Fusion 360, AutoCAD, Ansys Software: Static Structural, Modal

** Elementary proficiency*

RELEVANT COURSEWORK

- **Robotics & Control**: Introduction to Robotics, Instrumentation and Control Systems, Kinematics & Dynamics of Machines, Basics of Automotive Electronics
- **Mechanical Engineering**: Design of Machine Elements, Introduction to Finite Element Methods, Computational Fluids and Structures, Solid Mechanics, Fluid Mechanics, Applied Thermodynamics
- **Mathematics**: Numerical Methods, Linear Algebra, Multivariable Calculus, Differential Equations, Real Analysis, Complex Analysis
- **Electives**: Industrial Data Analytics, Basic Electronic Engineering, Fundamentals of Acoustics, Introduction to Electric Vehicles, Introduction to Hybrid Additive Manufacturing Techniques

LEADERSHIP & SERVICE

•President, Robotics Club, IIT Indore *Mar. 2025 - Mar. 2026*

•Team Lead, Inter IIT Tech Meet 14.0 *Nov. 2025 - Dec. 2025*

•Hardware Domain Lead, Core Member, CAE Club, IIT Indore *Sept. 2024 - Mar. 2026*

•Organising Team, Robotics Competition, Robotics Club, IIT Indore *Jan. 2025 - Feb. 2025*

HONORS & AWARDS

•Bronze Medal, Inter IIT Tech Meet 14.0, Autonomous Rover for Warehouse Inventory Management. *2025*

•Bronze Medal, IITISoC'24, Design & Modelling, Material Selection, Design and FEA of CubeSat *2024*
